DATA SHEET

Singularity Binary Vault

Automated Upload of Malicious and Benign Executables for Analysis

SentinelOne Singularity XDR autonomously protects an enterprise's technology stack by quarantining malicious files and tracking file operations in real time. These features fit most companies, but some organizations prefer to keep a copy of the observed executable files for their own analysis. They need an efficient solution with automated extraction and uploading of files without adding more obstacles to their workflows.

Singularity Binary Vault allows customers to automatically upload detected portable executables files, malicious or benign, from their environment to the SentinelOne cloud. This allows security teams to utilize these files for local forensics analysis and additional investigation workflows such as dynamic analysis and malware reversing.

Automatically Upload Executables to the SentinelOne Cloud

For teams wanting central access to all the possible executable files in their environment for storage in a centralized location, Binary Vault enables you to automatically retain files (malicious or benign) from across your technology stack and securely store them in the SentinelOne cloud for future use.

Retain Files for Forensic Analysis

Retain executable files for further forensic analysis and other additional investigation processes. Files are stored in the SentinelOne cloud for up to 30 days for further investigation.

Integrate with Other Security Tools

While most organizations have their security needs met with SentinelOne Singularity XDR, teams seeking to investigate files in other security tools, such as with a sandbox or SOAR application, can leverage Binary Vault to integrate with other security tools.

Key Benefits

Upload

Automatically upload benign and malicious executables to the SentinelOne cloud

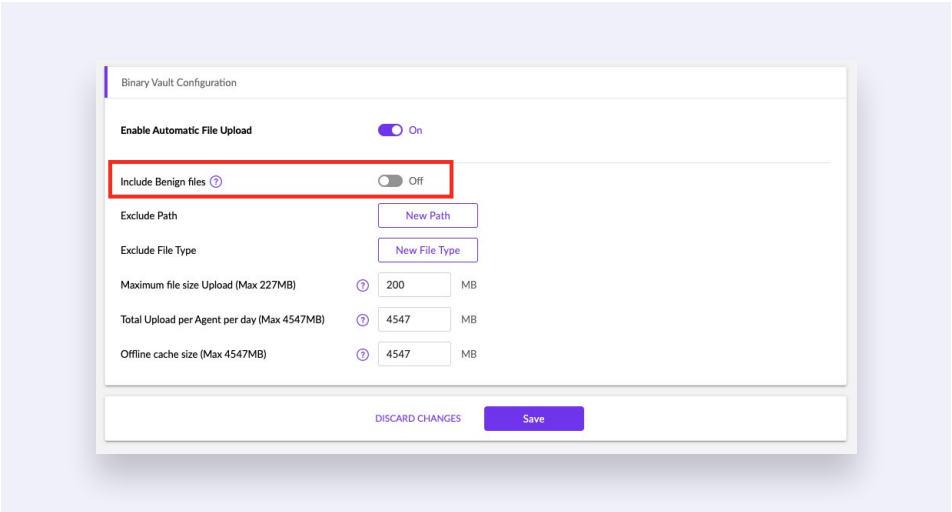
Analyze

Easily download and vet executables for further investigation and analysis to strengthen your enterprise risk posture.

Integrate

Connect with other security tools for further investigation of executables, including SOAR tools, sandboxes, and more

+ Stores files for 30 days
+ Each unique file is only uploaded once to keep network utilization low
+ Can be configured for specific file types or paths
+ Retrievable files via SentinelOne console or downloaded via API



Gartner peerinsights™

"

SentinelOne's EDR functionality is exceptional.

I am really impressed with SentinelOne proactive threat acknowledgement.

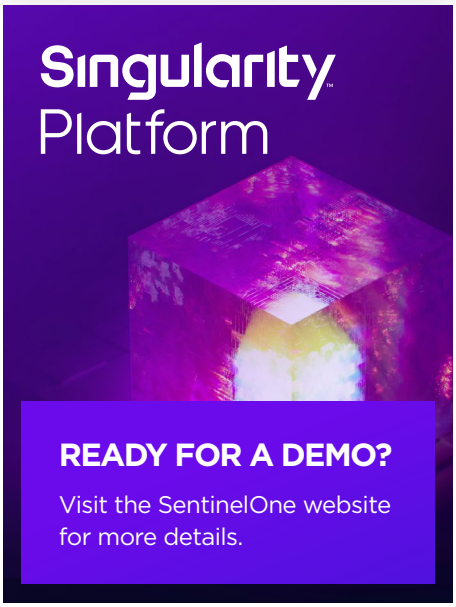
Customize With User-Definable Exclusions

With Singularity XDR's Binary Vault, customers can seamlessly upload their executable files with specific configurations to fit their needs. The Binary Vault configuration allows users to easily filter for file type, maximum file sizes, total uploads per agent per day, and other path exclusions.

Automate Binary File Upload

Binary Vault enables organizations to automatically store malicious and benign executable files to the SentinelOne cloud:

Automated extraction of files with customizable configuration to fit enterprise needs	Retain files for local forensic analysis or other automated analysis	Downloadable files for integration with other security tools for further investigation



Innovative. Trusted. Recognized.

About SentinelOne

SentinelOne is pioneering autonomous cybersecurity to prevent, detect, and respond to cyber attacks at faster speed, greater scale and higher accuracy than human-powered technology alone. The Singularity XDR platform offers real-time visibility and intelligent AI-powered response. Achieve more capability with less complexity.
